

Ajax Stock

Want to display Yahoo Stocks on your web sites? Ajax Stock not only displays the stock quotes but also uses Ajax technology to update them without refreshing the whole page.

You, as the website administrator, can customize the stock you want to track. Ajax Stock supports any stock symbols used by Yahoo Finance. You can even include the international stocks and options.

To use the tool, publish the module and place it to the places where you want to display stocks.

Depending on your installation of Joomla, you can choose either one of the following two options.

Ajax Stock for Joomla

Joomla AjaxStock v.1.0 is Free. This version has limited formatting capability. You can get it from our download section. For more advanced versions, there is a \$15 charge for the script. Future updates are free!
